

Quinoa germinated with one particular vitamin

PANMOL® MONOSUB STANCES

www.PANMOL.com

...the Vitamin-Boosters

ACTIVE SUBSTANCE:

- ONE PARTICULAR VITAMIN

PANMOL® MONOSUBSTANCES are a high-quality alternative to individual, isolated lab vitamins. Embedded in a plant matrix, the respective vitamin is available to the human organism in optimal form - intracellular and partly biologically activated. Quinoa from certified organic cultivation is germinated with the respective vitamin. Production is carried out within the scope of a patented process (analogue to PANMOL® B-COMPLEX), but with a higher

standardized dosage of the particular vitamin. PANMOL® MONOSUBSTANCES are intended to balance singular vitamin deficits specifically or to provide PANMOL® VITAL SUBSTANCES the turbo effect.

TECHNICAL DATA:

- For capsules, tablets and oral powders
- For foods
- As vitamin flour not water-soluble

POSSIBILITIES FOR YOUR INNOVATIVE PRODUCT:
